

Priority's Construction ERP

Priority's Construction ERP is an integrated end-to-end solution designed to manage construction companies' needs across the board, including general contractors, subcontractors, financial management, construction accounting, and service operations, all on a single platform.

Managing all the many elements in a complex construction project can be a real challenge. You need full visibility and control of your materials, subcontractors, construction sites, and costs – and adhere to your budget to deliver quality projects on time, often with limited margins. Priority Construction ERP software is a dedicated single and multi-project planning, management and execution solution designed to meet this sector's critical needs.

When end-product quality and profitability are your key objectives, you can trust Priority ERP to enhance information flow across your business, so that you can spend more time managing your operations, and less time chasing data. Priority seamlessly connects your back office to your teams on site, with advanced cloud-based ERP solutions and mobile apps, so that your contract managers and quantity surveyors can input and retrieve project data while they work – from anywhere, at any time.

Manage your entire inventory, get alerts on cost overruns, and manage your entire construction project from start to finish, with real-time insights of your operations. Automate, simplify and streamline your processes with integrated tools, including financials, budgeting and cost control, subcontractor management, bidding, contracts, commercial property management, and more.

Gain full control of your project progress and spend:

- Real-time business insights
- Single data source
- Simplify complex operational processes
- Accountability w/ integrated financials
- Tight control over budgets/cash flow
- Real-time access via mobile devices
